

The Foundation for Modern Cyber Defense

The CIS Critical Security Controls® (CIS Controls®) is the foundation organizations need to defend against today's most common and impactful cyber threats.

Your Path to Defensible Security

Follow the five milestones to build stronger defenses and maintain informed, resilient operations.

What's Next?

The CIS Controls provide advanced, intelligent, and proactive security operations.

With this strong core security in place, enterprises can confidently and securely manage advanced capabilities such as:

- **AI/ML-driven analytics** for predictive threat detection
- **User and entity behavior analytics (UEBA)** for anomaly detection
- **CI/CD pipeline security** to protect modern development workflows
- **Threat hunting, threat intelligence, and attack simulations** powered by consistent, accurate control data

SEC566: Implementing and Auditing CIS Controls

SEC566 equips security leaders and practitioners to apply and audit the CIS Critical Security Controls (v8.1) across enterprise, cloud, third-party, and AI-driven environments. Through hands-on labs, Cyber42 leadership simulations, and new AI-focused modules, students gain the expertise to design, validate, and continuously improve cybersecurity programs that withstand today's threats and tomorrow's regulatory scrutiny. To deepen your expertise in securing AI technologies, explore the SANS Critical AI Security Guidelines, a companion resource designed to help organizations build trustworthy, secure AI operations. sans.org/sec566

Creating Confidence in the Connected World®

CIS Critical Security Controls v8.1

- | | |
|---|---|
| 01 Inventory and Control of Enterprise Assets | 10 Malware Defenses |
| 02 Inventory and Control of Software Assets | 11 Data Recovery |
| 03 Data Protection | 12 Network Infrastructure Management |
| 04 Secure Configuration of Enterprise Assets and Software | 13 Network Monitoring and Defense |
| 05 Account Management | 14 Security Awareness and Skills Training |
| 06 Access Control Management | 15 Service Provider Management |
| 07 Continuous Vulnerability Management | 16 Application Software Security |
| 08 Audit Log Management | 17 Incident Response Management |
| 09 Email and Web Browser Protection | 18 Penetration Testing |

CIS Controls Tools

CIS SecureSuite® Platform, Controls Module (formerly CIS CSAT Pro) CONTROLS SELF ASSESSMENT TOOL
Helps teams track and document their progress in implementing the CIS Controls. Progress can be compared to industry averages.

CIS Risk Assessment Method (CIS RAM)
A method and tool to let enterprises of varying security capabilities navigate the balance between implementing security controls, risks, and organizational needs.

CIS Controls Assessment Specification
Identifies specific tests for Safeguards that can be automated, and provides a specification for vendors to implement them.

CIS Controls Navigator
Online tool to compare CIS Safeguards with recommendations found in other security frameworks.

CIS BenchWork
CIS collaboration platform for volunteers and CIS staff to share ideas, develop content, and learn from each other.

CIS Community Defense Model (CIS CDM)
Identifies the security value of CIS Safeguards against specific attacks identified by open data sources, and described using the MITRE ATT&CK Framework.

Navigating an Ocean of Cyber Frameworks
Authoritative and vetted cross-mappings from our security best practices applied to well-known target frameworks or standards. For current versions and information on mappings, go to www.cisecurity.org/controls/v8-1
